

way2go.cloud

Zero-Cost Cloud Architecture Blueprinting

Website Design Strategy

The UI will be a **Split-Pane Dashboard** inspired by modern IDEs. This maximizes the Snapdragon X Elite's screen real estate.

- **Left Pane (The Input):** A minimalist text area for "Architectural Intent" with floating "Inspiration Triggers" (pre-set templates).
- **Right Pane (The Canvas):** A high-performance SVG viewport rendering the Mermaid.js diagram in real-time.
- **Top Bar:** A "Simplicity Slider" and "Magic Share" button.

Code Structure (React + Cloudflare Workers AI)

The AI Prompt Logic

To keep costs at \$0, we will use a **System Instruction** that forces the model to be a "Pure Transformer":

```
"Translate the following infrastructure description into valid Mermaid.js graph code. Use 'subgraph' blocks for logical groupings (e.g., Frontend, Backend, Database). Output ONLY the code block. No explanation."
```

Development Roadmap

Phase	Task	Tool
-------	------	------

Infrastructure	Cloudflare Pages + Domain Setup	Wrangler CLI
Frontend	Vite/React + Mermaid.js UI	VS Code ARM64
Intelligence	Workers AI Binding + Prompting	Cloudflare Dash
Launch	DNS Routing to way2go.cloud	Cloudflare DNS

Visual Identity

Primary: #0051ad (Cloud Blue)

Secondary: #10b981 (Go Green)

Background: #ffffff (Clean White)
